

Adedamola Dauda

Backend & Platform Engineer

Warsaw, Poland · damoladauda10@gmail.com · github.com/sharedee2776 · linkedin.com/in/adedamola-dauda

PROFESSIONAL SUMMARY

Backend and Platform Engineer with experience building fintech infrastructure, payment systems, cloud-native backend services, and production-grade SaaS platforms. Experienced working with U.S.-based AI and software companies on infrastructure reliability, observability, Kubernetes environments, and backend automation workflows. Strong background in distributed systems, billing platforms, payment integrations, CI/CD, and cloud infrastructure. Proven ability to design scalable backend architectures, improve system reliability, and ship production-ready systems across fintech and AI-driven platforms.

PROFESSIONAL EXPERIENCE

AI Infrastructure & Platform Engineering Contractor

Confidential U.S. AI Company (via Mercor) — Contract

2025 – Present

- Built and validated Kubernetes-based infrastructure environments focused on observability, distributed systems, and production reliability.
- Worked on infrastructure debugging involving Prometheus, Jaeger, Helm, Chaos Mesh, and Kubernetes clusters.
- Automated environment validation workflows and deployment troubleshooting processes.
- Contributed to AI-assisted engineering evaluation systems and infrastructure reliability workflows.
- Improved reproducibility and operational consistency across containerised environments.
- Collaborated remotely with U.S.-based engineering teams on production-grade infrastructure tasks.

Tech Stack: *Kubernetes · Docker · Linux · Helm · Prometheus · Grafana · Jaeger · Bash · Git · CI/CD*

Backend Software Engineer

Ordit Technologies Limited (OrditAI)

July 2023 – Present

- Developed core accounting infrastructure supporting automated financial statements, ledgers, reconciliation workflows, and trial balances.
- Built scalable billing and subscription systems supporting invoicing, payment automation, and plan management.
- Implemented secure RBAC systems across accounting and multi-workspace modules.
- Collaborated with AI engineering teams to automate accounting workflows and journal entry processing.
- Improved backend reliability, maintainability, and performance across production services.
- Participated in backend architecture decisions for multi-tenant SaaS systems.

Tech Stack: *TypeScript · PostgreSQL · Docker · REST APIs · RBAC · CI/CD*

Software Engineer

Swipe

April 2021 – February 2023

- Contributed to card infrastructure systems enabling issuance of physical and virtual payment cards through banking API integrations.
- Built secure payment services collectively processing over \$10M in transaction volume.
- Developed Value-Added Services (VAS) infrastructure supporting utility payments and third-party transactions.
- Designed and implemented a Buy Now, Pay Later (BNPL) payment gateway for merchant checkout systems.
- Integrated multiple third-party payment gateways with secure transaction handling and webhook processing.
- Designed backend services for digital loan processing and repayment systems.
- Built automated loan collection systems that helped maintain non-performing loans (NPLs) below 1%.
- Collaborated on expense management infrastructure for organisational financial operations.

Tech Stack: *Node.js · TypeScript · PostgreSQL · Payment APIs · Webhooks · Docker*

PROJECTS

StreamPay — Creator Monetisation & Payment Platform

Backend / Platform Engineer

- Designed and built a multi-tenant fintech platform enabling creators to receive subscriptions and donations using African payment methods.
- Architected backend systems for wallets, transactions, withdrawals, analytics, and payment orchestration.
- Implemented provider abstraction layers supporting multiple payment gateways.
- Built secure webhook processing with idempotency handling, retries, and failure recovery.
- Designed asynchronous withdrawal processing with automated refund workflows.
- Added observability, logging, and transaction tracing for operational reliability.
- Deployed services using Docker-based infrastructure and CI/CD pipelines.
- Delivered the platform as a web application and Progressive Web App (PWA).

Focus Areas: Payments · Backend Architecture · Reliability Engineering · Fintech Infrastructure

TECHNICAL SKILLS

Backend Engineering	REST APIs · Distributed Systems · Payment Systems · Webhooks · Billing Platforms · Auth & RBAC · SaaS Architecture
Cloud & Infrastructure	Docker · Kubernetes · CI/CD Pipelines · Infrastructure Automation · Observability · Linux · Monitoring & Logging
Databases	PostgreSQL · Relational Data Modelling · Query Optimisation
Languages & Tools	TypeScript · Python · SQL · Bash · Git

LANGUAGES

English — Professional Proficiency

I hereby give consent for my personal data to be processed for recruitment purposes in accordance with Regulation (EU) 2016/679 (GDPR).
