

Adedamola Dauda

Backend & Platform Engineer

Warsaw, Poland · damoladauda10@gmail.com · github.com/sharedee2776 · linkedin.com/in/adedamola-dauda

PROFESSIONAL SUMMARY

Backend and Platform Engineer with 4+ years of experience building production-grade fintech systems, cloud-native infrastructure, and AI-powered backend services. Experienced working with U.S.-based AI and software companies on infrastructure reliability, observability, Kubernetes environments, AI agent evaluation pipelines, and backend automation workflows. Strong background in distributed systems, billing platforms, payment integrations, CI/CD, and cloud infrastructure — including hands-on project experience with **AWS (EC2, CloudWatch)** and **Azure (App Service, AKS, Azure DevOps, Azure Functions)**. Proven ability to design scalable backend architectures, improve system reliability, and ship production-ready systems across fintech and AI-driven platforms.

PROFESSIONAL EXPERIENCE

CONTRACT & FREELANCE ROLES

AI Platform Engineer

BespokeLabs AI (via Deel) — Contract

March 2026 – Present

- Designed and implemented production-grade evaluation environments for autonomous AI agents across DevOps, Site Reliability Engineering (SRE), Platform Engineering, and Cloud Operations domains.
- Built realistic, reproducible infrastructure scenarios using Docker, Kubernetes (k3s), Linux, CI/CD pipelines, and cloud-native tooling to simulate real-world engineering workflows.
- Developed end-to-end automated grading systems in Python to validate functional correctness, infrastructure behaviour, and deployment outcomes across diverse engineering scenarios.
- Created deterministic evaluation pipelines capable of measuring AI agent performance across multiple execution rollouts while minimising infrastructure variance and false negatives.
- Reviewed and validated complex engineering tasks to ensure reproducibility, security, and production realism across contributed evaluation scenarios.
- Collaborated within a globally distributed engineering organisation focused on advancing large language model evaluation and autonomous software engineering systems.

Tech Stack: *Kubernetes · k3s · Docker · Python · Linux · CI/CD · Platform Engineering · SRE · AI Evaluation · Infrastructure Automation*

AI Infrastructure & Platform Engineering Contractor

Confidential U.S. AI Company (via Mercor) — Contract

2025 – Present

- Built and validated Kubernetes-based infrastructure environments focused on observability, distributed systems, and production reliability.
- Worked on infrastructure debugging involving Prometheus, Jaeger, Helm, Chaos Mesh, and Kubernetes clusters.
- Automated environment validation workflows and deployment troubleshooting processes.
- Contributed to AI-assisted engineering evaluation systems and infrastructure reliability workflows.
- Improved reproducibility and operational consistency across containerised environments.
- Collaborated remotely with U.S.-based engineering teams on production-grade infrastructure tasks.

Tech Stack: *Kubernetes · Docker · Linux · Helm · Prometheus · Grafana · Jaeger · Bash · Git · CI/CD*

FULL-TIME EMPLOYMENT

Backend Software Engineer
Ordit Technologies Limited (OrditAI)

July 2023 – Present

- Developed core accounting infrastructure supporting automated financial statements, ledgers, reconciliation workflows, and trial balances.
- Built scalable billing and subscription systems supporting invoicing, payment automation, and plan management.
- Implemented secure RBAC systems across accounting and multi-workspace modules.
- Collaborated with AI engineering teams to automate accounting workflows and journal entry processing.
- Improved backend reliability, maintainability, and performance across production services.
- Participated in backend architecture decisions for multi-tenant SaaS systems.

Tech Stack: TypeScript · PostgreSQL · Docker · REST APIs · RBAC · CI/CD

Software Engineer
Swipe

April 2021 – February 2023

- Contributed to card infrastructure enabling issuance of physical and virtual payment cards through banking API integrations.
- Built secure payment services collectively processing over \$10M in transaction volume.
- Developed Value-Added Services (VAS) infrastructure supporting utility payments and third-party transactions.
- Designed and implemented a Buy Now, Pay Later (BNPL) payment gateway for merchant checkout systems.
- Integrated multiple third-party payment gateways with secure transaction handling and webhook processing.
- Designed backend services for digital loan processing and built automated repayment collection systems maintaining NPLs below 1%.
- Collaborated on expense management infrastructure for organisational financial operations.

Tech Stack: Node.js · TypeScript · PostgreSQL · Payment APIs · Webhooks · Docker

PROJECTS

StreamPay — Creator Monetisation & Payment Platform
Backend / Platform Engineer

- Designed and built a multi-tenant fintech platform enabling creators to receive subscriptions and donations using African payment methods.
- Architected backend systems for wallets, transactions, withdrawals, analytics, and payment orchestration.
- Implemented provider abstraction layers, idempotent webhook processing, and automated refund workflows.
- Deployed services using Docker-based infrastructure and CI/CD pipelines; delivered as web app and PWA.

Focus Areas: Payments · Backend Architecture · Reliability Engineering · Fintech Infrastructure

DevOps Capstone — Observability Stack on AWS

AWS

Personal Project

- Deployed enterprise-grade monitoring infrastructure on **AWS EC2** — Prometheus, Grafana, Loki, Promtail, and Alertmanager containerised with Docker Compose.
- Configured GitHub Actions CI/CD for automated deployments; demonstrated end-to-end AWS infrastructure ownership.

Tech Stack: AWS EC2 · Docker · Prometheus · Grafana · Loki · Alertmanager · GitHub Actions · FastAPI

AKS + Terraform on Azure DevOps

AZURE

Personal Project

- Provisioned an **Azure Kubernetes Service (AKS)** cluster end-to-end via Terraform IaC with full Azure DevOps CI/CD integration.
- Implemented zero-downtime deployment patterns and automated infrastructure rollback strategies.

Tech Stack: Azure · AKS · Terraform · Kubernetes · Azure DevOps · IaC · CI/CD

Azure Blue-Green CI/CD Pipeline

AZURE

Personal Project

- Production-ready Blue-Green deployment on **Azure App Service** with Docker and GitHub Actions — zero-downtime releases and automated health checks.

Tech Stack: Azure App Service · Docker · GitHub Actions · CI/CD · Flask

Webhook Monitor SaaS
Personal Project

- Production-grade SaaS for monitoring and managing webhook events — real-time analytics, usage-based billing, multi-tenant support, Stripe integration, deployed on **Azure Functions**.

Tech Stack: React · TypeScript · Azure Functions · Stripe · Firebase

TECHNICAL SKILLS

Backend Engineering	REST APIs · Distributed Systems · Payment Systems · Webhooks · Billing Platforms · Auth & RBAC · SaaS Architecture · NestJS · FastAPI
AWS	EC2 · S3 · CloudWatch · IAM · VPC · Elastic Load Balancing · Auto Scaling · AWS CLI · Cloud Infrastructure Management
Azure	AKS · Azure App Service · Azure Functions · Azure DevOps · Terraform on Azure · Blue-Green Deployments · Service Principals · Azure CLI
Cloud & DevOps	Docker · Docker Compose · Kubernetes · k3s · Helm · CI/CD · GitHub Actions · Terraform · IaC · Infrastructure Automation · Linux
Observability	Prometheus · Grafana · Loki · Promtail · Alertmanager · Jaeger · Chaos Mesh · Structured Logging · Transaction Tracing
AI & Evaluation	AI Agent Evaluation · LLM Systems · Automated Grading · Deterministic Pipelines · SRE · Platform Engineering
Databases	PostgreSQL · Relational Data Modelling · Query Optimisation
Languages & Tools	TypeScript · Python · SQL · Bash · Git · Node.js · Redis · OpenAI API

LANGUAGES

English — Professional Proficiency

I hereby give consent for my personal data to be processed for recruitment purposes in accordance with Regulation (EU) 2016/679 (GDPR).
